**GB5-96S - 56” SINGLE WHEEL**

**GB5-108S - 60” SINGLE WHEEL**

**GB5-108D - 60” DUAL WHEEL**

**GB5-132D - 84” DUAL WHEEL**
FEATURES

Integrated, lightweight composite core material manufactured with cross-linked polymer foam and fiberglass, offering high specific strength and toughness, more payload and the opportunity for increased fuel efficiency.

Heavy-duty, double-panel doors are secure and feature a watertight, double bulb seal providing ultimate protection from the elements.

Large, heavy-duty 6-point hinges are secure and applied with a blind fastener, which eliminates a leak point in the outer shell of the body.

Featuring a double bolted locking cylinder and molded gasket seal to prevent any water intrusion, Altec fiberglass bodies come standard with 100% stainless steel latches that are both waterproof and rust-free. A visual latch indicator shows if the door is not securely closed.

FIBERGLASS SERVICE BODIES
DESIGNED TO WORK, BUILT TO LAST.

BODY BUILDING SINCE 1929

Altec has been building truck bodies for more than 85 years, and offers the most innovative and dependable bodies in the industry. Altec bodies are built using advanced engineering, technology and state-of-the-art manufacturing processes. And, unlike the competition, Altec Bodies can be designed to your exact specifications.

6-Year Limited Warranty
GB BODIES

STANDARD FEATURES

- Interior compartments ecoated and finish paint extend the life of body.
- Double panel doors with stainless hinge maximize compartment security.
- Galvanneal smooth flooring provides maximum corrosion and slip resistance.
- 100% stainless steel 2 stage latch provides maximum security and leak resistance.
- Vertical strut system is ergonomical when adjusting shelving.
- Interior latch cover protects latch from damage.
- Bulb style door automotive seals protect compartments from the weather.
- Coated adjustable door strikers provide a secure weather tight seal.
- Quick-mount installation allows for fast, safe mounting.
- Shelves rated to 250 lb with adjustable dividers for multiple storage configurations.
- Includes tailgate with one-hand automotive style release.
- Gas shocks create a smooth opening and closing door swing.

STANDARD COMPARTMENTATION

- Two adjustable divider shelves and dividers, in the street and curbside front vertical compartments (1st and 2nd vertical 132" bodies only)
- One adjustable divider shelf and dividers in the street and curbside rear vertical compartments
- One adjustable divider shelf and dividers in the curbside horizontal compartment
Altec’s bodies are heavy duty and built to last. Industry-leading support, warranty and manufacturing processes result in a product you can trust. Altec provides the best solution for our customers’ needs. Whether it's lightweight, cost efficient or corrosion resistant Altec has the body to fit your needs.

ALTEC COATING PROCESS

Our proprietary cleaning system is a critical component in assuring unprecedented bonding of the epoxy primer to the steel. At a minimum of +130°F, our hot alkaline cleaning solution removes all contaminants through total immersion of the body and results in an exceptionally clean surface.

PRE-TREATMENT AND ELECTROCOATING PAINT AND RINSE

The pre-treatment regimen in the Altec electrocoating system consists of a nine stage cleaning and pre-treatment process plus E-Coat followed by 2 post rinses. Truck bodies and auxiliary parts are targeted for 30 minutes after dehydration and bake time in the overhead cure oven before entering a cool down zone.

PRE-TREATMENT STAGES

1. Alkaline Cleaner
2. Water Rinse
3. Alkaline Cleaner
4. Water Rinse
5. Titanium-Based Rinse and Conditioner
6. Zinc Phosphate
7. Rinse
8. Non-Chrome Seal
9. Reverse Osmosis Water Rinse

Unique Environmentally Friendly-Rinse:

After the primer application, any paint particles that haven’t been electrically charged and applied to the surface are rinsed off and collected to be used in the next paint application.

And unlike many of our competitors, our bodies are top coated before they leave the plant, preventing the degradation of the E-Coat from direct exposure to the sun and harmful ultraviolet rays.

The bodies are baked at 350°F to thoroughly cross link and cure the E-Coat.

We also offer undercoat, powder coat and liquid top coat.
